

ApexPay

The all-in-one Financial Operating System for Ethiopia.

AI-native, API-first platform unifying payments, a real-time double-entry General Ledger, workforce & payroll, procurement/AP, inventory, tax, FX, budgeting, and a role-scoped AI assistant — one compliant, Ethiopia-native core.

What was verified this cycle (all green on master)

- **Merchant dashboard on live data.** Payments (list + transaction detail with ledger journals), subscriptions (+ detail with plan/customer/invoices), refunds, payouts, and payroll (runs, calendars, final settlements, reports, tax brackets) all render from a real seeded Postgres, not mockups.
- **Developer portal.** Real, DB-backed API-key management (list/create/revoke) — created keys are immediately usable as Bearer tokens — plus webhooks endpoints & deliveries.
- **Embedded finance.** Lending, escrow, corporate cards, credit lines, and virtual accounts all return live seeded data.
- **Mobile (Flutter).** Tests pass 3/3; analyzer clean; Android APK built as a CI artifact on a large runner.
- **Security audit.** Money-safety, FIN-privacy, secret-handling, and webhook SSRF controls verified. A real gap was found and closed: `audit_logs` is now truly append-only via a DB trigger, and CI now fails if the trigger is ever removed.

Why ApexPay wins

- **Complete platform, not a feature.** 43 modules share one ledger, so a sale, a payroll run, a vendor invoice, and a tax payment all reconcile automatically.
- **AI assistant built in.** Role-scoped, grounded in live ledger/data, English + Amharic.
- **Ethiopia-native compliance.** NBE ONPS/10/2025, ET income-tax brackets, pension 7%/11%, VAT/TOT, Fayda ID, labour proclamation 1156/2019.
- **Production-grade.** 10/10 CI gates green, including a 29-section end-to-end smoke on real Postgres; money is always decimal.Decimal.

The opportunity

Defensible moat (integrated ledger + AI assistant), land-and-expand from payments to the full finance stack, and **live proof** — the entire data path is running against real data, not mockups.
