

ApexPay

The all-in-one Financial Operating System for Ethiopia

AI-native payments · Real-time General Ledger · Workforce & Payroll · Procurement, Tax, FX & Budgeting

Investor Overview — 2026

Executive Summary

A full-stack, AI-native financial OS built for Ethiopia — one ledger, many modules.

ApexPay is a full-stack, AI-native financial operating system purpose-built for Ethiopia. It is not a single payment gateway but a composable platform that unifies pa

Why ApexPay wins

Complete platform, not a feature. 43 business modules work off a single ledger, so a sale, a payroll run, a vendor invoice, and a tax payment all reconcile autom
AI assistant built in. A role-scoped Apex Assistant (RAG + tool-calling agents) answers finance, inventory and payroll questions for merchants, employees, vend
Lighter than legacy accounting. Real-time, API-first, Postgres-native GL — not a heavyweight desktop QuickBooks-style product.
Ethiopia-native compliance. NBE ONPS/10/2025, ET income-tax brackets, pension 7%/11%, VAT/TOT, Fayda ID, Ethiopian calendar, labour proclamation 1156
Live, verified data. The merchant dashboard is wired to the real API with seeded data; a 29-section end-to-end smoke runs green on a real Postgres in CI.

Market & Problem

Ethiopia's economy is digitizing rapidly, yet business software remains fragmented.

Businesses still juggle a payment gateway, a payroll tool, spreadsheets, and desktop accounting software that never talk to each other. A single transaction is re-

Pain points we solve

- Fragmentation — payments, payroll, accounting and procurement live in disconnected silos.
- Manual reconciliation — no shared ledger means cash never ties out automatically.
- Compliance burden — NBE, tax, pension and labour rules are complex and change often.
- Inflexible pricing — global gateways charge FX + cross-border fees on local ETB rails.
- No data gravity — no single source of truth for finance teams or AI to reason over.

Product & Architecture

One Go API core, one PostgreSQL ledger, four client surfaces, plus a self-service employee portal.

Core platform facts

- API-first
- Real-time
- Event-driven
- Four client surfaces
- Merchant-facing
- i18n —

ApexPay - 4-Layer Architecture

• Dry COGS, tax schedules, multi-currency FX revaluation.

• Recon, notifications).

• Android APK built in CI).

• Payroll (runs, calendars, final settlements, reports, tax brackets) render real seeded data.

How Each Stakeholder Uses ApexPay

A role-scoped conversational agent answers within each actor's scope, grounded in live ledger/data.

The Apex Assistant authenticates the caller, resolves whether they are a merchant, employee, vendor or admin, and answers only within that scope — grounded in

Who uses it

Merchant / Owner payments, cash position, P&L, balance sheet, inventory, invoices, budget variance, tax due. Approves payroll, closes fiscal periods, posts manual jour

Employee own YTD pay, leave balance, expense claims, payslips — via a self-service employee portal.

Vendor / Supplier self-service portal: their AP invoices and payment status only.

Customer hosted checkout: Telebirr, CBE Birr, bank, card, EthSwitch QR; 2FA above the NBE threshold.

Admin / Compliance onboarding queue, KYC/Fayda exam, compliance checks, approve/reject.

Quality, Security & Compliance

All 10 CI quality gates pass, plus a mobile APK build job.

Security gosec, trivy (SCA), gitleaks (no secrets), fin-privacy (no plain FIN in logs), no-float-money.
Auditability append-only audit_logs with a DB trigger; append-only assistant threads & messages.
Correctness SQL-param-cast lint prevents a whole class of pgx errors; double-entry balance validated on every journal.
E2E docker-roll, GL, tax, FX, procurement, portals, AI, i18n).
Mobile and t as an artifact.
Compliance AT/TOT, Fayda ID, labour proclamation 1156/2019.

CI Quality Gates - all 10 checks green

A bar chart titled 'CI Quality Gates - all 10 checks green'. The y-axis is labeled 'PASS' and has a horizontal line at the top. There are 10 green bars, each representing a quality gate. Each bar has a small green checkmark at the top. The x-axis labels are: go-build, gosec, trivy, gitleaks, no-float-money, fin-privacy, audit-append-only, sql-param-cast, lighthouse-axe, and docker-smoke.

Quality Gate	Status
go-build	PASS
gosec	PASS
trivy	PASS
gitleaks	PASS
no-float-money	PASS
fin-privacy	PASS
audit-append-only	PASS
sql-param-cast	PASS
lighthouse-axe	PASS
docker-smoke	PASS

Delivery Roadmap & The Opportunity

Eight milestones delivered; merchant data path now verified end-to-end.

From core payments to a hardened, AI-native operating system, ApexPay was built in eight increments that each shipped working software: Core Payments, Real-

The Opportunity for Investors

- Defensible moat — an integrated ledger + AI assistant is hard to copy feature-by-feature.
- Land & expand — start with payments, expand to payroll, accounting, procurement, and finance ops.
- Live proof — the full data path is running against real seeded data, not mockups.
- Ethiopia-first — a locally compliant, locally-routed platform no global vendor matches.
